1. Introduction

A Contact Manager is a software application used to store, organize, and manage contact information. It helps users maintain details such as name, phone number, email address, and address in a structured manner. This project is designed to simplify contact storage and retrieval so that users can easily manage their personal or professional contacts.

2. Objectives of the Project

- To store contact information efficiently.
- To allow users to add new contacts easily.
- To search contacts quickly.
- To update existing contact information.
- To delete unwanted contacts from the list.

3. System Requirements

Hardware Requirements:

- Computer or Laptop
- Minimum 4 GB RAM
- Hard Disk for storage

Software Requirements:

- Programming Language: Java / Python / C++
- IDE: NetBeans / Eclipse / VS Code
- Operating System: Windows / Linux

4. Features of Contact Manager

- Add new contact
- View contact list
- Search contact
- Edit contact details
- Delete contact
- Save contact information

5. Modules of the Project

Add Contact:

Users can enter name, phone number, email, and address to store a new contact.

View Contact:

Displays the list of all saved contacts.

Search Contact:ss

Allows the user to find a contact using name or phone number.

Update Contact:

Users can modify the existing contact details.

Delete Contact:

Removes unwanted contacts from the contact list.

6. Advantages

- Easy to manage contacts
- Saves time
- Organized data storage
- User-friendly interface

7. Applications

- Personal contact management
- Office contact management
- Student contact lists
- Business contact management

8. Conclusion

The Contact Manager project helps users store and manage contact details efficiently. It simplifies the process of organizing contacts and makes it easy to access information whenever required.
